Subject: electrodoagulation report from Waste Water - quick review
[Report body \(2\).pdf](#)

I finally got the report from last year's electrocoagulation test by Waste Water Management. My contract officer would like to get this finished this week, rather than extending the contract further.

Would any of you have time to review in the next few days and see if there are corrections or additions that would make this more useful? I am only sending to a few folks because I am not sure I could incorporate too many comments in the timeframe. But forward to others if you wish.

I am not sure they collected enough data from their two attempts to actually answer our detailed questions, anyway, since their large flow-thru tank never performed as anticipated.

There are a bunch of attachments I will forward separately.
